MORE FROM QUESTIONSANSWERED.NET ASUS was one of the first manufacturers to get serious about Android on tablets, and in recent years it's expanded into the world of smartphones, "phablet"-class devices and even wearables. The Taiwanese manufacturer has a history in PC hardware — in 2013 it was the fifth-largest PC vendor by sales, and it continues to hold a spot as one of the leading makers of internal parts such as motherboards and graphics cards. The company is led by chairman Jonney Shih, who often makes energetic appearances at press conferences and ASUS launch events. ASUS' first notable Android product was the original Transformer device, then called the ASUS EeePad Transformer, after the company's line of EeePad netbooks. The Android Honeycomb-based slate could be connected to a keyboard attachment to deliver laptop-like functionality. Several generations of Transformers have shipped in the intervening years, but the next big milestone for ASUS was the Google-branded Nexus 7. ASUS manufactured the 2012 and 2013 model Nexus 7s, which remain among the most popular Android slates. Since then the company has branched out into more device categories, shipping mid and entry-level smartphones in its ZenPhone series, as well as creating smartphones that dock into tablets in its Padfone series. (And, somewhat confusingly, there's also a line of large form factor phones under the Fonepad brand.) In 2014, ASUS entered the wearables market with the Android Wear-powered Zenwatch. While it has seen considerable success with its Android tablets, ASUS has yet to make much of a dent in the U.S. smartphone market. The quirky ASUS Padfone X launched on AT&T in mid-2014 after extensive delays, and the Zenfone series has yet to make much of an impact outside of Asia. Bei AliExpress.com willkommen Welcome back Abmelden Registrieren Anmelden Here's Asus' big XG43UQ. Image: Asus We covered Asus' announcement of the 32-inch ROG Swift PG32UQ earlier this week as part of CES 2021, but the company waited until now to reveal more monitors that have HDMI 2.1 ports. Basically, these are the screens you want if you have a high-end PC, a PS5, or an Xbox Series X so you can see your gameplay in 4K resolution at up to 120 frames per second. They're a big deal if you really want to let your hardware rip, which is why we've been closely covering monitors and TVs with the requisite HDMI 2.1 ports required to achieve that high-end resolution and performance balance. Starting with what will likely be the most expensive option (though Asus hasn't shared a price), the 43-inch ROG Strix XG43UQ is shown above. This model has a 4K VA-type display with a 144Hz refresh rate and 1ms response time. With its Display Stream Compression (DSC) feature, it should be able to display that full 4K 144Hz via its DisplayPort, like the ROG Swift PG32UQ can. This model sports two HDMI 2.1 ports with support for FreeSync Premium Pro, variable refresh rate (VRR), and auto-low-latency mode (ALLM). There are also two HDMI 2.0 ports. This panel has HDR1000, and it covers 90 percent of the DCI-P3 color space. The Asus TUF Gaming VG28UQL1A. Image: Asus Onto the TUF Gaming VG28UQL1A, it's a 28-inch 4K IPS display that also tops out at 144Hz refresh rate and 1ms response time. It has HDR400, which is going to be far less bright than the model above, and it covers 90 percent of the DCI-P3 color space. Asus says this one has VRR support. I'd show you a picture of the screen itself, but Asus thought it was appropriate to only send us pictures of its rear. We'll just trust that it does, indeed, have a screen. This model has two HDMI 2.1 ports and two HDMI 2.0 ports, alongside a DisplayPort 1.4 that should be able to push 4K at 144Hz refresh rate. Asus says that these monitors will release in Q2 2021, which is the general time range we've been provided for most of these exciting HDMI 2.1-compliant gaming monitors. The Asus ROG Swift PG279QM. Image: Asus If you aren't interested in jumping aboard the HDMI 2.1 train, Asus has one more monitor for those interested in high frame rates at stable resolutions. It's the ROG Swift PG279QM, a 27-inch 1440p IPS panel with a 240Hz refresh rate, 1ms response time, and HDMI 2.0 ports. It'll support HDR400 with 95 percent of the DCI-P3 color space covered. Asus says this monitor features Nvidia's G-Sync processor and Reflex Latency Analyzer tech to determine the latency of your accessories. It will release in Q2 2021, and no price has been shared at this point.
